SYSLOG Message: WARNING: <brickid> ATTN: TEMP 5 critical temperature reached @ 35 C/ 95 F.

Published 05/13/2002

Symptom(s):

```
ESP Class Description: System Controller
SYSLOG Message: WARNING:

     ATTN: TEMP 5 critical temperature reached @ 35 C/ 95 F.

ESP Event Type Id: 350
ESP Type Description: Temperature critical limit reached
```

Fact(s):

```
SGI Origin 3000
IRIX 6.5.X
SGI Onyx 3000
```

SGI Solution:

```
Check for bad fans, check for bad air flow, check for air flow obstruction, check for overheated room and repair as needed.  If all
environmental conditions are fine then check the sensor/ system controller.

Note: This solution was automatically retrieved by Embedded Support Partner (ESP).  For questions regarding this solution or for any
additional troubleshooting assistance please contact your support provider.
